## AI Analysis Summary

You've done a great job structuring your content with semantic HTML and providing meaningful alt text for images! To take it further, consider improving the accessibility of your share buttons and links by adding clear labels and ensuring interactive elements are keyboard accessible.

Priority recommendations:

- 1 Replace the <p> element with a <button> or <nav> element with an accessible label for the share section to clarify its purpose.
- 2 Add descriptive aria-labels or visually hidden text to social media links to explain their action, e.g., 'Share on Facebook'.
- 3 Convert the share icon inside 'share-div' into a keyboard-focusable button with an accessible name so all users can activate sharing.

## Issues 3

[All \(3\)](#)   [Error \(0\)](#)   [Warning \(3\)](#)   [Info \(0\)](#)

WARNING   [Navigation & Interaction](#)   AI Detected 1 occurrence

The 'share' section uses a generic <p> element with text 'share' but lacks a clear accessible label or role. This causes screen reader users to miss the purpose of this interactive area.

```
<section class="social hidden">  
  <p>share</p>  
  <div class="icons">  
    <a href="#"></a>
```

**WARNING**    **Navigation & Interaction**    AI Detected 1 occurrence

The share icons are links with only images that have alt text like 'facebook logo', which describe the image but not the link purpose. This makes it unclear for screen reader users what action the link performs.

```
<a href="#"></a>  
<a href="#"></a>  
<a href="#"></a>
```

[LEARN HOW TO FIX THIS ISSUE](#)

**WARNING**    **Navigation & Interaction**    AI Detected 1 occurrence

The share button in the 'share-div' uses an image with empty alt text inside a div, which is not keyboard focusable or announced as a button. This prevents keyboard and screen reader users from accessing the share functionality.

```
<div class="share-div">  
    
</div>
```

## AI-detected issues notice

Some issues shown above were detected by AI analysis and may require human review for accuracy. If you're unsure about any findings or need clarification, please reach out in the help channel on Discord for assistance.

# Strengths

5

## Structure & Semantics

Uses semantic HTML5 elements like <main> and <section> to organize content meaningfully.

## Structure & Semantics

Provides descriptive alt text for main content images, helping screen reader users understand visual content.

## Structure & Semantics

Uses heading <h1> to clearly define the main topic of the page.

## Navigation & Interaction

Uses <a> elements for social media links, which are keyboard accessible by default.

## Language

Specifies the page language with <html lang="en"> to help screen readers select correct pronunciation.
